Forest / Forêt

Association CNVC00010

Thuja plicata - Pseudotsuga menziesii - Abies grandis / Mahonia nervosa / Polystichum munitum - Achlys triphylla

Western Red Cedar - Douglas-fir - Grand Fir / Dull Oregon-grape / Western Sword Fern - Vanilla-leaf

Thuya géant - Douglas de Menzies - Sapin grandissime / Mahonia à nervures saillantes / Fougère épée - Achlyde à trois folioles

Subassociations: none

CNVC Alliance: not yet determined

CNVC Group: not yet determined

Type Description

Concept: CNVC00010 occurs on mesic, nutrient-medium sites within the Georgia Depression of British Columbia at elevations up to approximately 200 mASL. The vegetation is characterized by a closed canopy of mixed conifers, including western red cedar (*Thuja plicata*), Douglas-fir (*Pseudotsuga menziesii*), and grand fir (*Abies grandis*), a moderate shrub layer dominated by dull Oregon-grape (*Mahonia nervosa*) and/or salal (*Gaultheria shallon*), a herb layer dominated by western sword fern (*Polystichum munitum*) and vanilla-leaf (*Achlys triphylla*), and a moss layer dominated by Oregon beaked moss (*Eurhynchium oreganum*).

Vegetation: CNVC00010 is characterized by a closed canopy and an overstory dominated by high cover of *Thuja plicata*, *Pseudotsuga menziesii*, and/or *Abies grandis*. Low to moderate cover of *Acer macrophyllum* and *Cornus nuttallii* are sometimes present in the tree layer. *Tsuga heterophylla* occasionally occurs but is subordinate in importance to *Thuja plicata* and *Abies grandis*. The shrub layer is dominated by moderate to high cover of *Mahonia nervosa* and *Gaultheria shallon*, together with low cover of *Rosa gymnocarpa* and *Vaccinium parvifolium*. *Holodiscus discolor* often occurs with moderate abundance. *Polystichum munitum* and *Achlys triphylla* are the most prominent species in the herb layer, occurring with low to moderate cover. Other common species, occurring with low cover, include *Tiarella trifoliata* (see the Comments section), *Trientalis borealis*, *Rubus ursinus*, *Galium triflorum*, *Festuca subulata* and *Trillium ovatum*. The well-developed moss layer is dominated by high cover of *Eurhynchium oreganum*, sometimes in association with low covers of *Leucolepis acanthoneuron*, *Hylocomium splendens* and *Rhytidadelphus triquetrus*.

Environment: CNVC00010 occurs within the Georgia Depression of British Columbia from sea level to elevations of approximately 200 m. It occurs mostly on gentle to steep, middle or short slopes of all aspects. Soils are loamy, sandy or silty loams, sometimes with high coarse fragment content, but are moderately rich in nutrients. Soil moisture regimes are mesic or submesic. The range of this association is confined to areas of low annual precipitation (50-100 cm) within the coastal region.

Dynamics: These are mid- to late-successional (mature and climax) forest communities. Stands originate from infrequent stand-replacing fires (perhaps every 150-200 years) and occasionally windthrow. Within mature and old forests, small gaps result from the death of single trees or small groups of trees due to root-rots, bark beetles or windthrow. Stand-maintaining surface fires, both aboriginal and lightning-caused, were more frequent (perhaps every 50-100 years) prior to European settlement. Surface fires likely maintained a moderately open overstory. Gap dynamics in old forests result in an all-aged stand structure.

Canadian National Vegetation Classification (CNVC) Classification nationale de la végétation du Canada (CNVC)

<http://cnvc-cnvc.ca>

***Thuja plicata - Pseudotsuga menziesii - Abies grandis / Mahonia nervosa / Polystichum munitum - Achlys triphylla* CNVC00010**

Type Description (cont'd)

Range: This lowland association occurs within the Georgia Basin of British Columbia and portions of the Puget Trough in adjacent Washington, USA.

Conservation Status (NatureServe)

Global Conservation Rank: G1

National Conservation Rank: not yet determined

Subnational Conservation Rank: S1

Comments

CNVC00010 is distinguished from the zonal association for this climate, CNVC00014 [*Pseudotsuga menziesii* (*Abies grandis - Thuja plicata*) / *Mahonia nervosa - Gaultheria shallon*], by high cover of *Polystichum munitum* and presence of other rich-site indicator species such as *Tiarella trifoliata*, *Trillium ovatum*, and the moss *Leucolepis acanthoneuron*.

Tiarella trifoliata (three-leaved foamflower) may include *T. trifoliata* var. *laciniata* (cut-leaved foamflower), *T. trifoliata* var. *trifoliata* (three-leaved foamflower) and/or *T. trifoliata* var. *unifoliata* (one-leaved foamflower).
